Project Requirements

The Naval Training facility decided to enhance multimedia capabilities and AV equipment within classrooms and halls. Each of these rooms had a permanently mounted projector and a large projection screen. The halls either lacked the required AV equipment for training and debriefing or were too complicated for trainers to operate. The use of equipment already installed constantly created service calls. The Naval Training officers were looking for a lectern that will integrate all AV devices and will offer ease of use in operation, reliability and low maintenance. The Navy chose TecPodium Lectern as a fully integrated AV solution to cover all trainers' needs.

Solution

TecPodium lecterns have been successfully integrated and installed in a number of military training facilities and naval training bases. The type and size of halls within these facilities varies from small classrooms, used for training and education to large halls, typically used for ceremonies and debriefing.

Trainers are now able to use various AV applications, show presentations and work flawlessly. TecPodium allows them to facilitate easy and seamless presentations without the constant support of the technical staff. By doing so, trainers save time, and, most importantly, increase the use of AV equipment for the benefit of the officers and trainees. TecPodium ease of use has made it extremely popular among the trainers and the demand for "TecPodium training classes" is very high since.

Comments

The remarkable success of TecPodium in the navy bases has already spread to other military units and ever since, TecPodium has been installed in various other facilities.

TecPodium has also created a tremendous awareness from foreign legions that are currently in the process of evaluating TecPodium for their requirements.

The Navy training officers have shown great satisfaction with TecPodium Lecterns. According to Naval officers comments: "TecPodium offers an excellent solution. It allows us to deliver our message loud and clear. We had to find an advanced system that would fit our unique requirements and TecPodium definitely filled that role."
